for safety**

**Automatically  
recognizes  
each child**

## **BF-689** ***BODY FAT MONITOR FOR CHILDREN***

Tanita's BF-689 body fat monitor is designed for children ages 5 to 17 years old, taking each gender's physical developmental milestones into account for accurate body fat % measurement and analysis. The **FDA cleared** BF-689 can give parents, educators and caregivers a true picture of children's health and fitness levels. This durable scale features a tough, ABS plastic exterior material and is sized for boys and girls aged 5-17. The instant on and auto recognition feature means the child only needs to step onto the scale for measurements- the ultimate in ease of use. Four bright color LCDs are used to indicate healthy body fat levels based on the age and gender of the child.

### **Measurements:**

- ✓ Weight
- ✓ Body fat %
- ✓ Body fat judgement
